

We manufacture our seats in house, so we can easily custom fit a seat for you if one of our standard sizes doesn't fit. To order a custom seat, please follow the instructions below.

All measurements must be taken in absolute straight lines, DO NOT follow the curvature of the body.

A – Width of chest – Have driver stand with arms raised slightly, measure side to side 1 ½” below armpits.

B – Width of hips – have driver sit on bench or floor. Use cinder blocks or similar on each side of hips at a comfortable but snug pressure. Measure between blocks. (Alt method: driver standing, measure widest point of hips)

C – Height of Armpit – With driver sitting measure from flat surface to 1 ½” below armpit. Driver’s shoulders should be completely level across back and back completely straight.

D – Height of shoulders – With driver sitting in same position as above, measure from flat surface to top of shoulder.

E – Chest depth – Length of rib supports. Driver standing with back against wall, measure from wall to front of chest 1 ½” below armpit.

F – Width of shoulders – With Driver Standing measure outside to outside, 2” down from top of shoulders with arms relaxed at driver’s sides.

G – Height of Cheek – With Driver sitting, measure from flat surface to top of cheek (even with the tip of the nose when looking forward)

We also need the driver’s height and weight.
